Penetration Test Report for Internal Lab and Exam

John Doe

john@doe.com

OSID: OS-11111

February 7, 2019

Contents

1	Example	3
1.1	Service Enumeration	3
1.2	Remote Access Exploitation	3
1.3	Privilege Escalation	5
2	DeepThought	8
2.1	Service Enumeration	8
2.2	Remote Access Exploitation	8
2.2.1	Privilege Escalation	10
2.2.2	Proof and Post escalation	11

1 Example

1.1 Service Enumeration

Example	
Type	Open ports
TCP	1,2,3
UDP	23,42
Linux OS Soft XP	42.42.42.42

Table 1: Service enumeration Example

1.2 Remote Access Exploitation

Vulnerability Exploited: CVE-123-42 „Stupid Idiot User“

Vulnerability Explanation: Human is vulnerable to a remote code execution. Attackers can use this vulnerability to access the system from a remote location. When performing the penetration test, John Doe noticed an outdated version of Human running from the service enumeration phase. A public exploit¹ was available and could be used without modification. A targeted attack was performed on the system, which gave John Doe low privilege access to the system.

Vulnerability Fix: The publishers of Human have issued a patch to fix this known issue.

Severity: **Critical**

Proof of Concept: Modifications to the existing exploit was needed and is highlighted in red.

```
1 SELECT * FROM login WHERE id = 1 or 1=1 AND user LIKE "%root%"  
In the code section :  
3 Green Text
```

Red Text

5 Blue Text

Listing 1: Exploitation of Example

Exploit execution

Quote:"The execution of the exploit. This can be a URL that is browsed to, running a python script, executing a Metasploit module, etc. You do not need to screenshot every step, just the last step you took when sending your low privilege exploit."

Figure 1: Exploitation of Example

Screenshot:

Proof:

1 hostname && id && ifconfig && cat local.txt

Listing 2: Proof of local shell on Example

Figure 2: Local shell of Example

1.3 Privilege Escalation

Vulnerability Exploited: CVE-123-43 „Very Stupid Idiot User Again“

Vulnerability Explanation: Human is subject to a bug in XYZ. Attackers can use this vulnerability to perform a privilege escalation and take completely control over the system. When performing the penetration test, John Doe noticed an outdated version of Human. A public exploit² was available and could be used without modification. A targeted attack was performed on the system, which gave John Doe full administrative access over the system.

Vulnerability Fix: The publishers of Human have issued a patch to fix this known issue.

Severity: **Critical**

Proof of Concept: Modifications to the existing exploit was needed and is highlighted in red.

```
1 SELECT * FROM login WHERE id = 1 or 1=1 AND user LIKE "%root%"  
   In the code section :  
3 Green Text  
   Red Text  
5 Blue Text
```

Listing 3: Exploitation of Example

Priv esc exploit

Quote: " The execution of the privilege escalation exploit. This can be a URL that is browsed to, running a Python script, executing a Metasploit module, etc. You do not need to screenshot every step, just the last step you took when sending your privilege escalation exploit."

Figure 3: Priv escalation exploit of Example

Screenshot:

Proof:

```
1 hostname && id && ifconfig && cat proof.txt
```

Listing 4: Post exploitation of Example

Proof

Quote: "The output of the successful privilege escalation exploit from #3, the output of "ifconfig/ipconfig", and the contents of the proof.txt file"

Figure 4: Proof of Example

2 DeepThought

2.1 Service Enumeration

DeepThought	
Type	Open ports
TCP	1,2,3
UDP	23,42
Earth	42.42.42.23

Table 2: Service enumeration DeepThought

2.2 Remote Access Exploitation

Vulnerability Exploited: Vogons

Vulnerability Explanation: BLA BLA WRITE SOMETHING HERE

Severity: **Critical**

Proof of Concept:

```
1 Kali prep:
3 Modifications in the exploit
PANIC PANIC PANIC
5 Running the exploit
7 Escaping the low priv shell:
```

Listing 5: Exploitation of DeepThought

Figure 5: Exploitation of DeepThought

2.2.1 Privilege Escalation

Figure 6: Local shell of DeepThought

Figure 7: Priv escalation exploit of DeepThought

2.2.2 Proof and Post escalation

```
1 Post exploitation commands run:
```
